

The Alphalyse approach
– a part of your team

What makes us special

Personal guidance
from planning to execution
and follow-up

Expert knowledge
and top-of-the-line
technology

Experience
with most types
of biologics

Flexibility
to adapt to your
unique requirements

What we do

Host cell protein analysis

Reproducible identification and quantification of process-related impurities

ELISA coverage analysis

Ensure your immunoassay is fit for purpose and covers HCPs of concern to regulatory authorities

Product characterization

Reproducible, quantitative peptide mapping, intact mass analysis and amino acid analysis

Release testing

For quality control of biological API under GMP for late-stage clinical trials and market

The Alphalyse approach

You design the project proposal
in collaboration with our experts in proteomics and mass spectrometry

You are assigned a PhD-level project manager to fulfill your project objectives and keep your team updated on progress

Your samples are analyzed reproducibly
in accordance with ICH and USP guidelines, supported by advanced quality control tools – under GMP if requested

After receiving your report
the project manager will meet with you to review the results and answer your questions

Our values

Collaboration
with biopharmaceutical clients
and academic institutions

Scientific excellence
through academic research
and innovation

Sustainable practices
to uphold environmental
and social responsibility

Better medicine
through superior analytics

Want us to be part of your team too?
